The Cat Doctor of Dover ~ 187 Watson Road ~ P.O. Box 1395 ~ Dover, NH 03821 603-742-MEOW (6369)

Dear New Client,

Thank you for choosing us as your new veterinarian and hospital facility for your special family member. Let us introduce you to our services and give you a life long health plan for your cat.

Kitten Recommendations:

- Upper respiratory (FVRCP) vaccination at 8, 12,16 weeks, followed by a booster in one year. For indoor cats the vaccination's schedule after that age is every three years.
- Deworming for parasites should be done at 8 & 12 weeks with a stool sample test at 16 weeks. A yearly stool sample test should be done.
- Blood test for Feline Leukemia (FELV) and Immunodeficiency (AIDS) virus at 12 weeks, and rechecked as needed for outdoor and sick cats.
- Leukemia vaccination at 12 and 16 weeks of age, followed by a booster in 1 year. Indoor casts will not be vaccinated after the booster. Outdoor cats may need booster vaccinations every 2-3 years.
- Rabies vaccination at 12 weeks of age, with booster given in 1 year. Federal law mandates the rabies vaccination be given to all cats.
- Neutering or spaying is done at 5-6 months of age to prevent unwanted kittens, cancer, and stop males from wandering and fighting. Pre-operative blood tests are recommended prior to surgery to screen for dehydration, anemia and kidney function.

Adult Recommendations:

We recommend yearly physical exams to screen for health problems such as dental disease, weight gain or loss, parasitism, flea infestation, ear mites, heart disease, etc. Dental health is very important in our cats. Teeth, gums and mouth will be examined with a complete physical exam and individual recommendations made. While some owners are able to clean their cat's teeth, many cats need yearly dental cleaning and polishing to be part of their overall health care. Geriatric recommendations:

Our cats enter the geriatric state of their lives at approximately 8 years. This is the time of gradual increase risk of developing thyroid disease, kidney insufficiency, Diabetes Mellitus, or other health problems. We recommend a complete geriatric screening of complete blood count, blood chemistry profile, thyroid test, and blood pressure with the yearly physical exam to have a baseline of information. After that, individual decisions will be made on other screening tests for preventative health care. We recommend twice a year examinations on geriatric cats.

We are excited for you to thoroughly enjoy your family member for years to come and will help you make the best decisions regarding his or her health care. We can also advise you on nutritional or behavioral concerns you may have at any time. Please do not hesitate to ask my staff or myself any questions you may have now or in the future.

Thank you, Dr. Joann Young
